

Mate Tohai

Mechanical Engineer

I AM DRIVEN BY

I am driven by the challenge of turning mechanical designs into reliable, production ready products. With solid foundation in CAD softwares and hands-on experience with bringing products into manufacturing, I understand practical DFM principles. With experience in production and R&D I am able to lead a product from imagination to the end of the product process. With education and experience with CNC machines, lathes, mills, I have an overarching knowledge of manufacturing tools, and methods. I enjoy asking questions, solving problems, and taking ownership of finding the right solution.

WORK EXPERIENCE

2026 May - 2026 July	R&D Engineer - Nordic Clays
2023 November - 2026 April	Production Engineer - GRAD APS
2023 April- 2023 November	Bike Mechanic - Donkey Republic
2022 February - 2023 April	Mechanical Engineer - PamTerv Ltd.
2021 December- 2022 February	Mechanical Engineer - Student at PamTerv Ltd.
2018 August - 2021 December	Mechanical Engineer - Student at BIMMensor Ltd.

KEY ACHIEVEMENTS

- Between 2023 and 2026, I successfully managed the manufacturing, production and quality assurance of more than 5000 units of alcohol dispenser machines, with a team of 10 workers. While doing Quality reports and rapidly making changes to production.
- Successfully trained 20+ people on how to assemble in a production facility, and led trainings, providing them the required knowledge.
- Successfully helped to develop and launch new machines onto production
- Successfully led collaborations between teams to ensure correct manufacturing and supported components from concept development to successful production and market introduction.
- Successfully handled contact with workshops during development phase, and had success with documenting and ordering manufacturing.

EDUCATION

2018-2023	University of Óbuda - Mechanical Engineering Bsc. Major: CAD-CAM-CNC Thesis: Reverse engineering a plastic-moulded part, and designing a mould insert, and it's process planning.
2016-2018	Quality Control Inspector Course - Advanced Metrology - Writing Metrology and Quality assurance reports of manufactured parts - Learning the use of : - Gauge block / Slip blocks - Calipers - Micrometers

Portfolio (ongoing project)
<https://matetohai.github.io/>

PROFESSIONAL SKILLS

- Great with prototyping
- Takes ownership
- Great knowledge of production flow
- Good knowledge of GMP documentation
- Proficiency in CAD softwares
 - Inventor
 - AutoCAD
 - SolidWorks(3DXperience)
 - CREO
- Great knowledge in R&D disciplines
- Adaptability
- Communication
- Engineering documentation
- Detail oriented
- Self motivated
- Team-oriented

LANGUAGES

- English /fluent
- Hungarian /native
- Danish /beginner

ABOUT ME

- Always honest, reliable
- Independent, and solution oriented
- Have a great understanding of root cause analysis
- Great in high tempo environments
- Performance under pressure
- Loves manufacturing

WORK EXPERIENCE

R&D Mechanical Engineer - Nordic Clays **2026 May - 2026 July**

- Taking part in developing a new clay-shooter machine
- Coordinating with 3rd party suppliers, especially in China
- R&D for new parts, designing them for Manufacturing (DFM) and testing them in 3D printed versions
- Testing all 3rd party manufactured parts and quality checking
- Responsible for deadlines, launching manufacturing line
- Project coordination

Production Engineer - GRAD APS **2023 November - 2026 April**

- Optimising manufacturing processes
- Coordinating production schedules, resources, and materials
- Coordinating a team of 10 production workers
- Ensuring product quality through inspections and corrective actions
- Troubleshooting production issues
- Responsible for the RMA department. Handling all units, repairs, and the reports of statistics
- 3D modelling in Inventor and 3D printing quick fixes for production
- Prototyping
- Making drawings using GD&T, tolerances to ensure the right manufacturing processes.
- Creating BoMs for multiple products, including drawings, specifications, and documentation
- Implementing BOM changes on daily production, and ensuring the correct execution of it.

Results:

- Conducted multiple solo work trips to the USA, where I led a team of 4 to identify, document, and resolve issues on 600+ alcohol dispensers, ensuring compliance with quality standards and operational requirements
- Improved production performance through hands-on engineering support, quality analysis, and rapid implementation of process improvements

Bike Mechanic - Donkey Republic **2023 April - 2023 November**

- Repairing bikes (both pedal and E-bikes) in, and outdoors
- Checking bike quality
- Maintenance and distribution of bicycles around the city
- Unloading bikes from truck
- Assembling new E-bikes

Mechanical Engineer- PamTerv Ltd. **2021 December - 2023 April**

- Drawing HVAC systems
- Field Surveys
- Drawing Field Surveys in AUTOCAD 2D
- Modelling buildings based on drawings in AutoCAD 3D
- Reading Mechanical Drawings
- Drawing Building Floorplans
- Drawing PID's
- Drawing Vertical Pipe Designs
- Producing large-scale site plans of industrial facilities
- Creating documentations
- Leading a team of students

Results:

- Successfully led a group of 4 and executed surveying, updating, and 2D drafting of the site layouts, HVAC systems, and heat centres for a pharmaceutical manufacturing plant in Hungary.
- Reduced decades of outdated and fragmented documentation by updating ~60 years of drawings and P&IDs in less than 18 months
